

# Six Dinner Sid

Beitrag von „Schmeili“ vom 15. Februar 2012 18:10

Ach wie süß, das Buch kannte ich bisher noch gar nicht.

Google mal Six dinner sid worksheets

<http://www.n8fan.net/item/six-dinner-sid-worksheets/> - da gibt es ein "True or false" Arbeitsblatt - könntest du evtl. umwandeln mit Satz sagen und die SuS müssten dann eine rote/grüne Karte hochhalten

Hier mal eine kleine Beschreibung:

Zitat

## Six Dinner Sid

Sid lives at number one, Aristotle Street.

He also lives at number two, number three, number four, number five and number six.

Sid lives in six houses so that he can have six dinners.

Every

night he has dinner in number one, then in number two and then in number three, four, five and six. Then he is really full.

The people

in Aristotle Street [do](#) not talk to one another. So they all think Sid is their cat. So Sid has six names. And he sleeps in six different beds.

Life is wonderful for Sid, but one day he gets a bad cough and six people take Sid to the vet.

So Sid doesn't have just one spoonful of medicine. He has six.

The

vet rings the people in Aristotle street and they find out that Sid lives in number one and two and three and four and five and six. They are very angry. They say that Sid can only have one dinner a day.

So Sid goes to live at number one, Pythagoras Place. And he also goes to live at numbers two, three, four, five and six.

But here at Pythagoras Place the people talk to one another. So they know that Sid has six dinners. But they don't mind.
