

Schüler können Analoguhr nicht mehr ablesen

Beitrag von „mad-eye-moody“ vom 4. Mai 2018 18:44

(Huh... Das hab ich doch eben erst bei imgur gesehen: dort wurde es als fake news entlarvt:
<https://imgur.com/gallery/nVmTCuK>)

Eben bei BBC nachgelesen, die die Quelle zu diesem "Mythos" haben. Da wurden Einzelaussagen bequemerweise aus dem Kontext gerissen und aufgeblasen:
<http://www.bbc.com/news/education-43882847>

"Young people find it a bit easier to use a digital clock - and if they're timing themselves for questions, it might make it less likely that they'll make mistakes," said Mr Trobe.

He said, as an example, if students had to answer a question in 15 minutes, it could be easier for them looking at a clock with a digital format, if that was how they usually told the time.

There were no official indications about taking down analogue clocks, he said, but such claims were being made by teachers on social media.

One of the examples on Twitter being quoted is from a head of English, "Ms Keenan".

*But she told the BBC that the digital clocks that had been installed had broken down - and now had been replaced by a traditional analogue clock. **She said it wasn't the case that a majority of students can't tell the time using such analogue clocks, but it could be a barrier for some.***
